

Ensemble Business Software Level 3.71.140 Release Announcement

November 1, 2002

We are pleased to announce the release of Ensemble Business Software Level 3.71.140. In addition to routine program corrections, this release includes significant enhancements to our Distribution, and Supply Chain solutions. This release will be automatically shipped to all Level 3.71.* accounts on current ClientFirst™ Product Support Plans.

Distribution Solution Enhancements

- **Past Due Credit Advisory Enhancements** – New Customer Workflow options allow unique Past Due Credit Advisory Settings per customer. A new Hold Order Credit Approval Report can be generated and provides a listing of all hold orders and a description of the credit problem associated with each order. When these issues have been resolved via Cash Receipts Entry or other credit modifications to the customer's account, the report advises which open orders can be approved.
- **Matrix Stock Status Report** – This new report provides the option to print Cost or Price information and allows printing with All matrix detail or individual Sales Order, Purchase Order, On Hand or Available detail.
- **Time-Phased Availability Report** - The Time-Phased Availability Report has been enhanced with Available and Summary Options. The Time Phased Availability Report provides an “aged” snapshot of available item quantities by calculating against Sales Order ship dates and Purchase Order expected delivery dates. The new *Available* option displays only the calculated available quantity at the specified Aging Dates for each item color and size. The *Summary* option provides a capsulated view of available quantity by item/color in each warehouse.
- **Inventory Merchandise Report** – This report, previously available in Apparel Associate, is now available in Ensemble Business Software. This powerful report provides an overview of Inventory Item Cycles, reports Sales Analysis information, Matrix Distribution, and Purchase Order Distribution. This information may assist in determining production schedules, staffing requirements, and most important, Customer Purchasing Trends.

EDI Processing Solution Enhancements

- **Outbound 940 Picking Sheet to Public Warehouse** – Our EDI Processing Module now includes support for the 940 Document allowing Picking Sheets to be generated either via Finished Goods Allocation or Sales Order Picking Sheet Printing and electronically transmitted to your Public Warehouse for processing.
- **Inbound 945 Packing List Document** – Inbound 945 Packing List documents from your Public Warehouse may now be processed through the EDI Processing Module.
