- Work Order Processing

Accounting

- Accounts Payable
- Accounts Receivable
- Fixed Asset Accounting
- Bank Reconciliation
- General Ledger
- Payroll
- Magnetic Media Reporting

Ensemble Business Software is built on MAS 90 and MAS 200, the industry-leading business management software solutions for mid-market companies. Ensemble extends the functionality of MAS 90 and MAS 200 with features required by apparel, footwear and soft goods companies while retaining the core product's inherent power and flexibility.

All Ensemble solution platforms share the same application functionality – from our Small Business Edition to our SQL Server-based Enterprise Edition. This means that the user experience is identical across all of our platforms – the interface, feature set, workflow, reports, etc. This coordinated design allows small and mid-market apparel companies to leverage their investment in full-featured apparel software and training as they add more users and achieve greater transaction volumes.

Small Business Edition - Small apparel companies face the same unique industry challenges that large apparel companies do. That's why we've created an affordable turn-key solution with the same application functionality as our Standard and Enterprise editions.

Standard Edition - The Ensemble Standard Edition is ideal for configurations of 15 to 50 concurrent users. Thin client/server technology separates the program logic, processing, and data management tasks from user-interface processing tasks.

Enterprise Edition – This Microsoft SQL Server-based platform is a robust, full-fledged implementation that has been thoughtfully created to take full advantage of the SQL features that are especially beneficial to business management software.

“With Ensemble Business Software, we now have a solution that combines our accounting and apparel systems into one integrated package.”

Tim Beare, President, San Simeon, Inc.

Distribution

The heart of an Ensemble Business Software implementation is our Distribution solution – modules providing a comprehensive approach to inventory control, order entry and purchasing needs. The Inventory Management module enables you to reduce data entry requirements and increase stock visibility through more effective organization of styles, colors, sizes, UPCs and NRF codes under a single Item Number; Sales Order Processing features an intuitive spreadsheet-style entry system; and Purchase Order Processing enables you to source both raw materials and finished goods with greater ease.

Warehouse Management

If you operate a Warehouse Facility then you know how important it is to get the right merchandise to the right customer at the right time and at the right cost. Our Warehouse Management modules help expedite every step of the process – Finished Goods Allocation, Picking Sheet Control, Packing List Processing, Ship Notice/Manifest – to ensure increased warehouse throughput while retaining accuracy and at the same time reduce the needless expense of duplicate data entry and routine errors.

EDI Processing

The Ensemble EDI Processing solution is designed to provide retail supply channel vendors with the tools you need to realize productivity gains and increase business with key customers. You can leverage our experience with over 70 trading

partners with full-featured EDI, VMI, cataloging and public warehouse functionality.

Manufacturing

The Manufacturing modules provide detailed and accurate tracking and reporting throughout the entire manufacturing process – from outside contractors to work in process to completion. The Manufacturing solution offers a series of features that help maximize efficiency throughout all stages including the ability to create multi-level bills with flexible options – ideal for embellishers and other value-added shops. When goods are finished they are instantly posted to Inventory Management or Sales Order for seamless integration.

Accounting

No other accounting software combines the depth, functionality and ease of use to the degree of the MAS 90 and MAS 200 family of products. It's no wonder this system is recommended by more CPAs than any other mid-market accounting product. The five core accounting modules – General Ledger, Accounts Payable, Accounts Receivable, Bank Reconciliation and FAS Asset Accounting – are seamlessly integrated with the other solutions in the family – providing timely financial information for more informed decisions and improved cash flow management. Ensemble Business Software introduces specific features required by the apparel, footwear and soft goods industry – including factoring, royalty reporting and enhanced organizational relationships.

Business Intelligence

Designed to increase productivity and enhance functionality, these report writers and decision support tools work seamlessly with MAS 90 and MAS 200 to create an all-encompassing information management system for your business. Business Insights, designed specifically for high-level managers such as CEOs, CFOs and sales directors, enables you to view financial information in an attractive graphical format from your own customized homepage. It's a timesaving, effective way to review and analyze your vital company information. Business Alerts is another device to keep you "in the know". This tool can be configured to send you e-mail when a predefined condition is met. For instance, if inventory drops below a certain point, you'll be notified with an instant message.

Front Office Solutions

By linking Ensemble Business Software to a Customer Relationship Management (CRM) solution your company can make significant strides in sales performance and customer service. Working independently, CRM applications (such as SalesLogix and ACT! 2000) increase efficiency in customer-centric processes including tracking and communicating with customers and prospects. Linking and synchronizing a CRM solution to your Ensemble Business Software allows you to provide superior customer service as your sales force can readily access all the necessary information relative to a specific customer.
