**Ensemble Business Software Releases Production Order Processing Module to Help Companies Manage Outsourced Manufacturing Processes**

Beavercreek, Oregon – February 21, 2008 – Ensemble Business Software, a provider of ERP solutions for the apparel and footwear market, today introduced Production Order Processing for companies that manage raw materials internally and outsource cut, make, trim, embellishment and other operations. Production Order Processing facilitates the issue of raw materials to specific projects, allows visibility of raw materials at the vendor’s location and automatically updates inventory quantities and transfers when raw materials are required and/or consumed during the outside production of finished goods. This enhancement has been designed to leverage the existing processes within the Purchase Order, Inventory Management and Bill of Materials modules to that clients can get up to speed quickly. In fact the implementation of Production Order Processing may simply require the automation of processes that already being done manually.

**About Ensemble Business Software**

Founded in 1987, Ensemble Business Software, Inc. is a Sage Software Authorized Partner dedicated exclusively to the apparel, footwear and soft goods market.
